

RF ALUMINIUM OXIDE flap wheels on flanges

Description:

Aluminium oxide flaps and X-Flex weight backing.

Main features and benefits:

Thanks to the exceptional range of diameters and heights available, the most appropriate handiness/durability combination is guaranteed.

The abrasive used ensures perfect flexibility/strength balance.

Since 350 and 410-mm diameter wheels are heavier, they are individually balanced so as to ensure their stability and balance when used on automatic machines or robotized lines.

Recommended applications:

Finishing wide flat, concave and convex surfaces; grinding the internal and outer surfaces of tanks, containers and pipes; finishing parts of irregular shape such as handles, taps and moulded parts. Removing and cleaning welding seams.

Work surfaces:

Stainless steel, standard steel, alloyed steel, aluminium, titanium, nonferrous materials and alloys, plastic materials, plastic reinforced by fibre glass, marble, stone, rubber.
